

## Solid Waste Reduction and Recycling Policy – Acme Voyages

Acme Voyages has developed and implemented a comprehensive solid waste reduction and recycling policy. The policy includes quantitative goals aimed at reducing the generation of non-reusable or non-recyclable waste across all operations.

Key measures include:

- **Reuse initiatives:** Encouraging the reuse of office materials, such as coffee cups, stationery, and packaging.
- **Recycling programs:** Segregation of waste streams for paper, plastics, metals, and electronic equipment, all sent to licensed recycling facilities.
- **Paper reduction:** Promoting double-sided printing, digital documentation, and minimizing unnecessary paper use.
- **Bulk purchasing:** Reducing packaging waste and transport emissions by purchasing in bulk wherever feasible.

The policy is actively monitored and evaluated, with progress measured against predefined targets. By implementing these measures, Acme Voyages ensures that waste is minimized, resources are used efficiently, and environmental impact is reduced while promoting sustainable operational practices.
